

By Professor J. B. Cleland.

Heard the full song of the Silver-eye (*Zosterops halmaturina*) on Thursday, 26th May, and that of the Blackbird (*Turdus merula*) on Friday, 27th May, 1927. In January last a nest, with three eggs, of the Red-capped Dotterel (*Charadrius ruficapillus*) was found at the mouth of the Inman Valley. A Scarlet Robin (*Petroica multicolor*) was seen in the Adelaide University grounds during the last week of July.
