## **Foreword**

This is the fifth edition of the Field List of the Birds of South Australia and the first to be an electronic copy only. This is to give more birders the opportunity to download a free copy from the Birds SA website, rather than having to purchase the booklet.

The first Field List of the Birds of South Australia appeared in 1976, the second in 1980, the third in 1985 and the fourth in 2008. It has now been nine years and I'm proud to present this fifth edition in 2017. Over the past four decades the taxonomy or classification of Australian birds has been through more changes than at any other time because older morphological methods have been complemented by modern and more objective genetic techniques.

I've taken the liberty of reiterating a portion of the last Foreword from the 2008 edition, as it is still very relevant today, quoting our past President, Jeremy Robertson. "These new methodologies have uncovered many surprising relationships between the different families of birds and resolved many mysteries surrounding the evolution of the unique Australian avifauna. Thirty years ago [now forty], Australian birds were considered odd descendants of Eurasian birds, peripheral, and of little interest in understanding the evolution and radiation of the birds of the world. How our views have changed, for nothing could be further from the truth! More than 50% of the birds in the world are in the Order Passeriformes, and [most] are now considered descendants of Australasian songbirds. So not only are we fortunate in the wealth of beautiful, endemic birds in our State, it also turns out they are very important on a world scale."

The new list has been extensively reworked, building on the previous editions and information from many sources, including published and unpublished observations from the members of Birds SA (The South Australian Ornithological Association Inc.). The data have been vetted carefully by Andrew Black, Graham Carpenter, Philippa Horton and Brian Blaylock and have been compiled into this new fifth edition. They have taken into account recent changes and follow the standard for Birds SA, Birds in the Census of South Australian Vertebrates (Horton, Blaylock and Black 2013). So, this fifth edition is an up to date and accurate list of birds found in South Australia, arranged in the current taxonomic order (to Family level) and with latest information on their distribution.

Climate change is now having an effect on the habitat and movements of some species of birds and on occasion they are being found not in their traditional areas. So, this Field List will come in handy for serious birders and ornithologists in understanding where the traditional habitats were or should be for our birds of South Australia. With the recent stunning confirmation of the long elusive though never presumed extinct Night Parrot in Queensland and Western Australia, who knows, we might have further confirmed sightings in the South Australian Outback someday soon? The new Field List may inspire some interesting and exciting birding trips around our state.

Despite all the care taken in compiling this current edition of the Field List there are likely to be some errors and birds occurring in unusual places; if so, please report these sightings to Birds SA so any further editions can be corrected.

John Gitsham  
President Birds SA  
September 2017

## Introduction

This online edition of the Field List indicates the known distribution of all bird species recorded in South Australia's mainland, offshore islands and ocean waters. Inclusion is based on accepted published records, or unpublished records with supporting evidence. Introduced species with an established self-supporting population are also included, as are introduced species with former populations no longer considered extant (Appendix 1), unconfirmed records awaiting supporting information (Appendix 2) and previously listed species that have been rejected (Appendix 3).

The purpose of the Field List is to provide a greater understanding of distributional limits of birds within the State and an indication of likelihood of encounter. It is hoped that this will encourage observers to submit records of threatened or rarely observed species, or species recorded outside their currently known range.

The taxonomy of Australian birds has seen major changes since the fourth edition of this Field List was published in 2008. Here we follow the standard for Birds SA, Birds in *The Census of South Australian Vertebrates* (Horton, Blaylock and Black 2013), as currently being revised, but only to the level of species. A modified list, to include all subspecies, is planned. Within each family, the taxonomic order of the IOC World Bird List is followed. No reference to the schedules of the National Parks and Wildlife Act are included in this edition.

The regional boundaries are those of the fourth edition. Written definitions delineate the approximate and sometimes broad and arbitrary boundaries used here and in other SAOA publications. The names of the major Regions of the State have been little modified since publication of the first Annual Bird Report in 1964 (*South Australian Ornithologist* 24: 22-24). Most Regions are readily recognised by reference to an obvious location but not all can be identified so precisely.

As in the fourth edition, status is based on “observability”, the likelihood of encountering a species in the field in its preferred habitat within a given region, and not as a measure of relative abundance. This approach is similar to that applied in *The Australian Bird Guide* (Menkhorst et al. 2017).

Birds that occur only seasonally or show a marked seasonal change in abundance are identified in the following ways. An (s) after the status key indicates that the species is a spring-summer visitor, while (w) indicates an autumn-winter visitor to the State or Region and (p) a passage migrant, most likely to be recorded in autumn or spring. An (irr) indicates a species prone to irrupting in response to particular conditions, while (fl) refers to birds, particularly in the North East (NE), that are most prevalent during or after local flooding of inland wetland systems.

Being an online publication this Field List may be amended from time to time, allowing us to make corrections and additions. We will therefore be pleased to receive any pertinent information that can improve its accuracy.

Please send your comments to [fieldlist@birdssa.asn.au](mailto:fieldlist@birdssa.asn.au).

## **Regional boundaries and definitions**

Presented here are the currently recognised Regions within South Australia used in this Field List (refer to map), given in the order in which they are listed in species distributions.

**North West (NW):** This is bounded on the east by the Flinders Ranges and North East and on the south by the Spencer Gulf and Eyre Peninsula. This vast region incorporates a number of bio-geographical entities, including the Musgrave and Everard Ranges, northern rivers, Stuart Shelf, Great Victoria Desert (including its south-easterly extension the Yellabinna), Nullarbor Plain, Gairdner–Torrens Basin, Gawler Ranges and the surrounds of upper Spencer Gulf.

**Eyre Peninsula (EP):** This region's northern boundary abuts the North West along a line running from Whyalla through the northern tip of Lake Gilles CP, then goes west along the northern boundary of Pinkawilline CP, north-west through small salt lagoons bordering the western Gawler Ranges, reaching and following west along the Dog Fence (the southern limits of the Yellabinna wilderness area) to the point east of Yalata (on the southern fringe of the Nullarbor Plain) where the fence turns south to the Great Australian Bight coast. EP includes numerous offshore islands.

**Yorke Peninsula (YP):** This region's north-eastern boundary is the Mid North along a line from the head of Gulf St Vincent approximately north through Bute and Port Broughton to Spencer Gulf.

**Flinders Ranges (FR):** Its lower eastern boundary abuts the Lower North East; its upper eastern boundary is from Martin's Well Station, north to Balcanoona and Moolawatana Stations. Its northern boundary is the North East and follows a westerly line through Mt Hopeless, Mt Lyndhurst Station and Lyndhurst. Its western boundary is the North West, running south through Lyndhurst, Leigh Creek, Parachilna and the railway line to Stirling North and Port Germein. We distinguish northern (nFR), central (cFR) and southern (sFR) Flinders Ranges, with boundaries at around the latitude of Parachilna and Blinman, and a little north of Quorn, the latter reflecting the northern limit of Sugar Gum woodland at the Dutchman's Stern.

**Mid North (MN):** In the south the Mid North borders the Adelaide Plains and Mount Lofty Ranges through Port Wakefield, Balaklava, Riverton and Eudunda. Its eastern limits border the Murray Mallee and Lower North East, running north through Robertstown and the eastern slopes of the North Mount Lofty Ranges east of Burra and Terowie to Oodla Wirra. It is separated in the north from the Flinders Ranges along the railway through Peterborough, Jamestown, Gladstone, Crystal Brook and Port Germein. Its western boundary is the Yorke Peninsula and Spencer Gulf.

**Adelaide Plains (AP):** In the east it borders the Mount Lofty Ranges, its west borders Gulf St Vincent and its north borders the Mid North.

**Mount Lofty Ranges (MLR):** In the west this borders the Adelaide Plains along a line approximately north through Sellicks Beach, Willunga, Happy Valley, and along the metropolitan foothills, Gawler, Freeling, Tarlee and Riverton. In the east it borders the Murray Mallee and in the north it borders the Mid North.

**North East (NE):** The western boundary is the North West and follows the route of the old ‘Ghan’ railway through Lyndhurst, Marree and Oodnadatta to the Northern Territory border. Its southern boundary is the Flinders Ranges and Lower North East. This region includes the eastern Lake Eyre drainage basin, and the Simpson, Strzelecki and Sturt Stony Deserts.

**Lower North East (LNE):** Its lower western boundary abuts the Mid North; its upper western boundary abuts the Flinders Ranges from Oodla Wirra north along the eastern slopes of the Northern Flinders Ranges. Its north borders the North East along the Dog Fence from the New South Wales border west to the southern margin of Lake Frome.

**Murray Mallee (MM):** In the west this borders the Mount Lofty Ranges and Mid North along a line approximately north through Middleton, Strathalbyn, Woodchester, Callington, Monarto, Tepko, Palmer, Sanderston, Truro, Eudunda and Robertstown. Its northern limit borders the Lower North East along a line between Robertstown and the northern boundary of Gluepot Reserve and through the southern boundary of Danggali Conservation Park.

**South East (SE):** This extends north to border the Murray Mallee at Latitude 36° S just north of an east–west line through Keith and Salt Creek. The southern Coorong is part of this region. The Upper (uSE) and Lower SE (lSE) are separated by a line through Kingston and Naracoorte.

### **Kangaroo Island (KI)**

**Marine Offshore (MO):** This region includes all coastal inshore waters from the low tideline to the continental shelf.

**Oceanic (O):** This region includes all offshore waters from the continental shelf to the 200 nautical mile limit of Australian territorial waters.

## Regional map

Figure 1. Map showing the approximate boundaries of the regions

### Identification of regions

AP	Adelaide Plains	MN	Mid North
EP	Eyre Peninsula	MO	Marine Offshore
FR	Flinders Ranges	NE	North East
KI	Kangaroo Island	NW	North West
LNE	Lower North East	O	Oceanic
MLR	Mount Lofty Ranges	SE	South East
MM	Murray Mallee	YP	Yorke Peninsula

## Keys

### Sub-regions, part regions and localities

They are used to further define a given region when a species' status varies significantly within that region.

Coor	Coorong (within MM and uSE)
GR	Gawler Ranges (within NW)
GVD	Great Victoria Desert (within NW)
LAA	Lakes Alexandrina and Albert (within MM)
NU	Nullarbor Plain (within NW)
RM	River Murray (within MM)
SD	Simpson Desert (within NE)
SF	Saltfields
Yel	Yellabinna (within NW)

Parts of regions also may be described as: coastal, islands, c (central), n (northern), s (southern), e (eastern), w (western), ne (north-eastern), nw (north-western), se (south-eastern), sw (south-western).

### Cross-regional

W	Widespread (throughout State except in regions indicated)
MS	Marine shores of the mainland, KI and smaller islands or of bracketed regions

### Other Codes

*	Exotic species
#	Introduced or re-introduced Australian native species
(fl)	Most likely observed during or immediately after floods
(irr)	Irruptive when favourable conditions prevail
(p)	Passage migrant most likely observed in spring and autumn
(s)	Most likely observed in spring-summer
(w)	Most likely observed in autumn-winter

## **Observability status within region or sub-region**

C	Common	easily found in reasonable numbers in appropriate range and habitat
MC	Moderately Common	usually found in reasonable numbers in appropriate range and habitat
U	Uncommon	not easily found in appropriate range and habitat, and often in low numbers
R	Rare	difficult to find in appropriate range and habitat, then usually in low numbers
V	Vagrant	few records for the State or specified region(s)
Ex	Extinct	no confirmed records during the last fifty years, so presumed extinct
BW	Beach-washed	recorded only as beach-washed or exhausted, i.e. not seen alive at sea

## Field List

### STRUTHIONIFORMES

STRUTHIONIDAE – ostrich

**Common Ostrich** \* *Struthio camelus*

sFR, LNE

R

### CASUARIIFORMES

CASUARIIDAE – Emu

**Emu** *Dromaius novaehollandiae*

W (not AP)

<b>Citrine Wagtail</b> <i>Motacilla citreola</i>	MM (Goolwa Effluent Ponds)	V

<b>Grey Wagtail</b> <i>Motacilla cinerea</i>	sFR (Alligator Gorge), MLR (Waterfall Gully)	V
<b>Australian Pipit</b> <i>Anthus australis</i>	W MLR	C U
FRINGILLIDAE – finches		
<b>European Greenfinch</b> * <i>Chloris chloris</i>	MLR, coastal SE AP, MM, KI	U R
<b>European Goldfinch</b> * <i>Carduelis carduelis</i>	MN, AP, MLR, MM (RM, LAA), SE, KI MM EP, YP, sFR, LNE	MC U R

## **Appendix 1. Former introductions**

The following species (both native and introduced) have been reported from the regions indicated, with some maintaining short-lived populations that have not persisted in the wild.

Malleefowl # <i>Leipoa ocellata</i>	KI
Muscovy Duck * <i>Cairina moschata</i>	AP, MLR, MM
Ruddy Shelduck * <i>Tadorna ferruginea</i>	AP, MM (LAA), SE
King Quail * <i>Excalfactoria chinensis</i>	EP (Boston Island)
Common Pheasant * <i>Phasianus colchicus</i>	KI
Helmeted Guineafowl * <i>Numida meleagris</i>	KI
California Quail * <i>Callipepla californica</i>	MN, MLR
Tasmanian Nativehen # <i>Tribonyx mortierii</i>	SE (Valley Lake)
Rosy-faced Lovebird * <i>Agapornis roseicollis</i>	EP, AP, MLR
Rose-ringed Parakeet * <i>Psittacula krameri</i>	YP (Kadina)
Australian Ringneck # <i>Barnardius zonarius</i>	AP, MLR
Red-whiskered Bulbul * <i>Pycnonotus jocosus</i>	AP, MLR, MM (sRM)
Common Myna * <i>Acridotheres tristis</i>	NW (Port Augusta), AP, SE
Song Thrush * <i>Turdus philomelos</i>	AP
Southern Red Bishop * <i>Euplectes orix</i>	AP, MLR, MM (sRM)
Scaly-breasted Munia * <i>Lonchura punctulata</i>	AP, MM (RM)
Chestnut-breasted Mannikin * <i>Lonchura castaneothorax</i>	MLR, MM (LAA)

## **Appendix 2. Unconfirmed records**

Snow Petrel <i>Pagodroma nivea</i>	MO
Westland Petrel <i>Procellaria westlandica</i>	MO
House Swift <i>Apus nipalensis</i>	neEP, AP, MM, SE

## **Appendix 3. Rejected records**

The following have been previously listed for the State but formally rejected based on available evidence.

Masked Booby <i>Sula dactylatra</i>
Dunlin <i>Calidris alpina</i>
Grey Heron <i>Ardea cinerea</i>
Roseate Tern <i>Sterna dougallii</i>
Speckled Warbler <i>Pyrrholaemus sagittatus</i>

## **Edition 5 Updates**

Revision #5.0 (20 September 2017)

Revision #5.1 (20 March 2018)

Page size changed from A4 to A5

Extensive updates to distribution for Flinders Ranges (FR)

Taxonomic updates IOC #8.1

*Tadorna radjah* to *Radjah radjah*

Purple-backed Fairywren *Malurus assimilis* split from Variegated Fairywren

*Malurus lamberti*

## Generic Species Index

### A

Albatross 14, 15  
Apostlebird 49  
Avocet 22

### B

Babbler 44  
Bee-eater 32  
Bellbird 46  
Bishop, Red 54  
Bittern 18  
Blackbird 52  
Bluebonnet 34  
Boobook 31  
Booby 54  
Bowerbird 36  
Bristlebird 42  
Brolga 22  
Bronzewing 29  
Brushturkey 13  
Budgerigar 36  
Bulbul 54  
Bustard 21  
Butcherbird 46  
Buttonquail 22  
Buzzard 20

### C

Chat 39, 40  
Chough 49  
Cicadabird 46  
Cisticola 51  
Cockatiel 33  
Cockatoo 33, 34  
Cockatoo, Black 33  
Coot 22  
Corella 33, 34  
Cormorant 19  
Crake 21  
Crow 48  
Cuckoo 30  
Cuckoo, Bronze 30  
Cuckooshrike 46  
Curlew 24  
Currawong 46

### D

Darter 19  
Dollarbird 32  
Dotterel 23, 24  
Dove 29, 30  
Dowitcher 26  
Drongo 47  
Duck 11, 12, 13, 54  
Duck, Whistling 11  
Dunlin 54

### E

Eagle 20  
Eagle, Sea 21  
Egret 18  
Emu 11  
Emuwren 37

### F

Fairywren 37  
Falcon 32, 33  
Fantail 48

Yellowlegs 26

## **The South Australian Ornithological Association Inc.**

The South Australian Ornithological Association Inc. (operating as Birds SA) was founded in Adelaide in 1899 and is the oldest birding association in Australasia. It is a non-profit organisation dedicated to the conservation and study of Australian native birds.

Membership is open to both serious and casual birdwatchers, and any age group is welcome.

Monthly meetings are held on the last Friday of every month, except December and public holidays in the Charles Hawker Conference Centre, University of Adelaide, Waite Road, Urrbrae starting at 7:45 pm.

Field trips are conducted monthly on Thursday, Saturday and Sunday and visitors are welcome to come along.

The Association has an extensive library containing books, journals and other resources which are available for members to borrow.

For more information, visit us on the web at [www.birdssa.asn.au](http://www.birdssa.asn.au)

You can contact us at [general@birdssa.asn.au](mailto:general@birdssa.asn.au) or write to
