

Bird Notes.

By J. W. Mellor.

Mr. Frank Storr reported to me that while travelling from Melbourne via Geelong on 22nd February, 1929, when five miles on the Melbourne side of Lake Bolac, near Wickliffe, Victoria, he noted 60 Native Companions (*Megalornis rubicundus*) in a field by the roadside. They were feeding, and allowed him to get quite close to them. There was a lot of water in the vicinity.
