

By Rev. P. P. Darke.

On the catchment of the house dam of Aroona Station, Min-
gary, S.A., from 19th to 22nd October, 1937, there were seen two
Sharp-tailed Sandpipers (*Erolia acuminata*), and an adult and
a young bird (without the black chest band) of the Black-
fronted Dotterel (*Charadrius melanops*).
