
BIRD NOTES

Nankeen Night Heron (*Nycticorax caldonicus*).—A nest of this species was seen in a large pine tree at the Adelaide Zoo entrance on April 16, 1947. Three young and two adults were roosting in the branches at mid-day. Some fragments of Yabbies (*Parachaeraps bicarintus*) were below the tree. The gateman told me he saw one of these birds carrying a fish (? carp) from the River Torrens, close by; it was about 4 inches long.—A. L. Rau.
