
BIRD NOTES

Nankeen Night Heron (*Nycticorax cal-
donicus*).—During February, 1948, there were
at least five occupied nests of this species in
the tall pine trees in the grounds of the Ade-
laide Zoological Gardens. They contained
either eggs or young in all stages. The adult
birds were active during the day and occa-
sionally returned to the nests with carp or
perch captured in the nearby River Torrens.
