

ERRATA IN BIRD REPORT 1969-70

(*South Aust. Ornith.* 26, 1971, pp. 14-15)—40. Pelican: 45. Little Black Cormorant: 48. Little Pied Cormorant: 53. White-Faced Heron: 54. White-Necked Heron. The locality for all reports of these species over my initials was given as Glenburn (sic) Scrub. Glenburr Scrub is c. 18 m. east of Caloote, many miles from the nearest surface water. The locality for these records was River Murray, between Mannum and Young-husband. (MM). *154. ORIENTAL DOTTEREL (p. 18). The record of this species over my initials is incorrect. The error obviously arose through a repeated reporting error in S.A.O.A. "Newsletter" No. 53, and was subsequently corrected in "Newsletter" No. 54 (June 1970, p. 15). This record should have been referred to as:—*153. LARGE SAND DOTTEREL.
