

LIST OF ENGLISH AND SCIENTIFIC BIRD NAMES, RECOMMENDED FOR USE IN PAPERS SUBMITTED TO THE *SOUTH AUSTRALIAN ORNITHOLOGIST*

The Species List below presents generally accepted common and scientific names for the birds of Australia and its territories (Note: E = extinct and * = introduced).

The List is taken, with kind permission, from *The Taxonomy and Species of Birds of Australia and its Territories*, L. Christidis and W.E. Boles, 1994, Royal Australasian Ornithologists Union Monograph 2. That publication is available from the RAOU for \$18 plus \$3 postage and handling: 415 Riversdale Road, Hawthorn East, Vic. 3123; Fax: 03 9882 2677; Phone: 03 9882 2622. It:

1) presents an updated taxonomic list;

2) provides brief explanations for taxonomic changes in the literature and for those adopted in the publication;

3) incorporates new species described and new records of vagrants to Australia since 1975; and

4) expands the geographical coverage to include Australia's island territories.

The Supplementary List on page viii provides records of vagrant species not yet validated, records of ship-assisted species, introduced species that were established but have now been extirpated, and records in the literature which are now not accepted.
